JOURNAL OF THE IRON AND STEEL INSTITUTE

VOLUME 160 1948

SUBJECT INDEX

[References to papers and articles given in full text are indicated by the word (*Paper*) following the page number.

Indexing of Alloy Steels and Other Alloys : In the indexing of alloy steels, carbon and iron are ignored and the alloying elements contained in the steel are arranged in alphabetical order ; for example, all references to nickel–chromium–molybdenum steel will be found under the heading chromium–molybdenum–nickel steel. In the indexing of other alloys, carbon and iron, when present, are included in the title ; iron when present is always mentioned first and the other elements follow in alphabetical order, carbon being in all cases mentioned last. Examples : " Iron–silicon–carbon alloys " and " iron–chromium–nickel–carbon alloys."]

A.F.A. Test, for determination of clay content of moulding sand, 438
A.T.V. Equipment, use in spectrum analysis of steel, 453
Abrasion Resistance, blast-furnace refractories, 219
Absorption, atmospheric, in steel plants, effect on optical pyrometry, 271 (*Paper*)
Abstracts, 99, 217, 321, 435
Accidents, in foundries, prevention, 325
Acid Bessemer Steel, welding, 441
Acid Blast-Furnace Process, France, examination, 107
Acid-Resistant Lacquers, composition and properties, 330
Acid-Resistant Paints, composition and properties, 330
Acid Slag, in converters, action on refractories, effect of use of O, 103 ; effect on desulphurization in Fe–Mn system, 221
Acoustic Method, surface testing, use of Capac Bin-aural equipment, 447
Acoustic Strain Gauges, 115
Adherence Testing Machine, for metallic coatings, 228
Adhesion, enamel on electrodeposited Cd coatings, 330 ; paint coatings to metals, effect of surface preparation, 330 ; Zn coatings on steel, method of improving, use of organic coatings, 329
Adhesive Strength, electrodeposited coatings, factors affecting, 228
Admiralty D.W. Steel, properties and tests, 326
Adsorption, gases on solids, 454 ; O on Fe, 454
Ageing, mild steel after straining, 446 ; soft steel alloyed with Al, 233 ; strain, steels, 334
Agglomerates, determination of silica, 119
Aggregates, polycrystalline, preferred orientation, study by X-ray goniometer, 118
Air, compressed, use in atomization of fuel oil for open-hearth furnaces, 100 ; contamination during machining of Be stainless steel, 111 ; entrainment in gas burners, 99
Air Turbulence, relationship to heat transfer, 100
Aircraft Gas Turbines, forging disks for, 109
Aircraft Industry, inspection, magnetic methods, 335
Aircraft Parts, steel, centrifugal casting, 107 ; steel castings for, 222
Alabama, Fe ore, concentration, 218
Algoma Steel Corporation, manufacture of silica bricks, 218
Allis-Chalmers Manufacturing Co., lost-wax precision casting practice, 324
Alloy Cast Iron, constitution and properties, 323
Alloy Steel. *See* Steel, alloy
Alloying Elements, effect on hardening of die and tool steels, 338 ; effect on tensile properties of malleable cast Fe, 232
Alloys, anisotropy, 334 ; bronze, for dies, Ampco 24 type, properties, 440 ; cast-Fe, hardened, for ball-mill linings, properties and performance, 233 ; Cr ferritic, elasticity, effect of melting *in vacuo*, 331 ; Co–W, electrodeposition, 229 ; Co–Zn, hardening, 113 ; corrosion by methyl alcohol, 341 ; erosion corrosion, 340 ; ferro-, production, 221 ; ferro-, production, Germany, 1939–46, 221 ; ferromagnetic, electro-physical properties, 116 ; furnace-brazing, technique and precautions, 228 ; hard-facing, application by metal spraying, 229 ; hard-metal, estimation, significance of magnetic properties, 447 ; hard-metal microstructure, 442 ; hardness and strength, theory, 446
heat-resistant, composition, properties, and testing, 117, 336 ; for gas turbines, corrosion, 343 ; for jet engines (*with bibliography*), 336
high-temperature, production by powder metallurgy, 113 ; Fe–Al–Co–Cu–Ni, magnetization curves, 447 ; Fe–C, liquid, viscosity, 337 ; Fe–Cr–C, at high temperatures, electrical resistance, 447 ; Fe–Cr–W, determination of density and viscosity of liquid metal and slag, 323 ; Fe–Ni–Si, cooled in magnetic field, magnetic properties, 447 ; Fe–Ni–Si, hysteresis loops and permeability curves, 447 ; Fe–Nb, creep strength and properties, 448 ; Fe–Si–C, constitution, 451 ; Fe–Si–C, occurrence of carbides, 21 ; Fe–Ti, creep strength and properties, 448 ; Fe–W, electrodeposition, 229 ; Fe–Zn hardening, 113 ; in magnetic field, variations in electrical conductivity, 446, 447 ; microstructural analysis, 117 ; Ni, high-, fabrication, 442 ; Ni, properties, 232 ; Ni–W, electrodeposition, 229 ; non-destructive tests, 231 ; ordered state, rate of approach, 444 ; permanent-magnet, properties, 116 ; properties at low temperatures, 336 ; properties and structure, 240 (*Book*) ; quantitative analysis, application of drop method, 119 ; Senperm, magnetic properties, effect of heat-treatment, 447 ; testing, 456 (*Book*)
Alnico, properties, 116
Aluminium, bonding to Fe and steel, 329 ; coating on steel, 329 ; in steel, determination, photo-electric method, 235
Aluminium-Coated Strip, production in Germany, 229
Aluminium Coatings, sprayed, applications, 329
Aluminium-Killed Bomb Method, for determination of O in liquid steel, 390 (*Paper*)
Aluminium–Steel Bonded Assemblies, processing, 111
America. *See* United States
American Brake Shoe Co., foundry plant, 107
American Foundrymen's Association, control of defects in grey-Fe castings, 107
American Rolling Mill Co., jigs for electrolytic polishing of small parts, 112
American Society for Metals, 1948 Metals Handbook, 238
Ammonia, determination, microchemical diffusion method, 454 ; effect on corrosion of steel by town gas, 339
Ammonia Condensers, corrosion, prevention, 341
Ampco, bronze alloy for dies, properties, 440
Anaerobic Corrosion, Fe pipes in soil, examination, 342, 343
Analysis, 118, 235, 452 ; alloy steels, separation of elements by pyridine method, 236 ; chemical, steel, 453 ;

Analysis—*continued.*
dilatometric, methods, 232; dispersion, use of supercentrifuge, 455; gas, semi-micro apparatus, construction, 118; hydraulic, application to design of pouring gates, 106; mathematical, for plotting smooth curves through scattered points, 114; metallographic, determination of boundaries of structural elements, 451; methods used in metallurgical laboratories, 452; microstructural, alloys, 117; particle, metal powders, turbidimetric method (*with bibliography*), 331; phase, steel, 233; preparation of specimens, 453; quantitative, alloys, application of drop method, 119
spectrum, determination of B in steel, 452; determination of Ca in steel, 118; determination of C in Fe and steel, 452; determination of elements in cemented carbides, 454; Fe and steel, methods, equipment, and applications, 452; mathematical study, 452; nomographical evaluation, 452; rapid calculation methods (*with bibliography*), 453; slag, 454; steel, 236, 237; steel, effect of shape and size of specimen, 237; steel, use of A.R.L. equipment, 453; steel, use of counter-electrode, 453; technique at Klus Works, 453
strain, 114; stress, X-ray equipment for, 445; surfaces, use of plastic replicas, 233; thermochemical, combustion in cupolas, 438; thermodynamical, inclusions in mild-steel weld metal, 29
Analyser, ultrasonic, design and use, 117
Andalusite. *See* Refractory Materials
Anelasticity, Fe, 333
Anisotropy, alloys and metals, 334; in sheet and strip, examination, 114
Annealability, defective, malleable cast Fe, causes, 105
Annealing, bright, controlled atmosphere heat-treatment furnaces for, 439; cold-strained soft Fe, structural changes, 448; gears, by high-frequency induction heating, 439
Anodes, Mg, for cathodic protection of steel in sea water, 342
Anodizing, Cu-oxide rectifiers for, 228
Anthracite, use in cupolas, 323, 438
Anti-Corrosive Compositions, for marine use, properties and developments, 330
Anti-Fouling Compositions, examination, properties, and performance, 177 (*Paper*), 230, 330
Arc, welding, photography of transfer of metal, high-speed camera for, 326
Arc Furnaces. *See* Electric Furnaces, arc
Arc Welding. *See* Welding, arc
Argentina, Fe and steel industry, survey, 455
Armco Steel Corporation, continuous galvanizing practice, 329
Armour Plate, presses for, modernization, use of electro-hydraulic control, 224; welding with low-alloy electrodes, disease effects on welders, 442; welds, radiographic examination, 442
Ash, fuel, in reducing atmospheres, determination of fusibility, 321
Atlanta Steel Co., gas manufacture for steel production, 436
Atmospheres, acid, corrosion of Fe, 339; controlled, use in heat-treatment, 108, 223, 439; industrial, corrosion-resistance of high-alloy steel, 367 (*Paper*)
Atmospheric Absorption, in steel plants, effect on optical pyrometry, 271 (*Paper*)
Atmospheric Corrosion, Fe and steel, 339; Fe and steel wires, 276 (*Paper*); overhead lines, 235
Atmospheric Corrosion Resistance, phosphatized steel, 339
Atmospheric Corrosion Tests, accelerated, 286 (*Paper*); low-alloy steels, 234
Atomic Structure, engineering metals, 233
Atomization, fuel oil for open-hearth furnaces, use of compressed air, 100
Atoms, solute, effect on behaviour of dislocations, 444
Audigage Thickness-Testing Machines, 447
Austenite, decomposition, examination, magnetometric method, 233; decomposition by nucleation and growth processes, 451; diffusion of C, 337; effect on magnetization curve of steel, 447; transformations during isothermal heat-treatment, apparatus for study, 451
Austenitic Chromium Steel, intergranular corrosion, 234
Austenitic Stainless Steel, stabilization, 234
Austenitic Steel, elongation at low temperatures, 443
Australia, foundry practice, 323; Fe and steel industry, survey, 455
Australian Gas Light Co., examination of effect of NH_3 and HCN on corrosion of steel by town gas, 339
Austria, foundry practice, 437; investigations of effect of additions of N to high-alloy steel, 104
Automobile Axle Shafts, induction heating, plant and practice, 223
Automobile Castings, grey-cast Fe, repair by welding, 228; malleable Fe, cores, 324; small, collapsible square-mesh wire baskets for handling, 324
Automobile Industry, American, use of high-tensile low-alloy steels, 449
Automobile Spring Leaves, quenching, submarine process, 224
Automobile Stampings, Kirksite dies for, 108
Axial-Flow Compressors, hollow blades for, production, 325
Axle Shafts, automobile, induction heating, plant and practice, 223

Baking, cores, factors affecting, 106
Baldwin Locomotive Works, creep-testing machines, 117
Ball-Bearing Steel, types, properties, and behaviour, 449
Ball-Mill Linings, hardened cast-Fe alloys for, properties and performance, 233
Banox, use in rust-proofing steel for outdoor use, 230
Barco Straightening Machine, for wire, 226
Basic Bessemer Process, metallurgy, 437
Basic Bessemer Steel, developments in production of improved types, 220; welding, 441
Basic Electric Furnaces, arc, use of O, 221
Basic Open-Hearth Furnaces, cooling, 103
Basic Open-Hearth Process, oxidation of C, Mn, P, Si, and S, 437; removal of P, 322
Basic Slag, blast-furnace, production by smelting Ti magnetite ore, 102
Basicity, open-hearth slag, determination, 104, 118; slag, rapid estimation, 121 (*Paper*)
Baths, steel, enamelling, 230
Bauxite, Fe extraction, Hungarian practice, 102
Beams, butt-welded, residual stresses, 443
Bearings, corrosion, kinetics, 118; journal and roller, operation and clearances, 226; roller, dynamic capacity and applications, 441; roller, heavy, heat-treatment furnaces for, 223
Belt-Conveyor Systems, for Fe and steel plants, construction and operation, 185 (*Paper*)
Bend Tests, alternating, sheets, 333; welded specimens, effect of bending angle and thickness, 327
Bentonite, properties and performance, 105
Benzole-Absorption Plants, corrosion and sludging, 341
Beryllium, in C steel, effect on properties, 337
Beryllium Stainless Steel, machining, air contamination, 111
Bessemer Converter Practice, 323
Bessemer Converters, flame temperature regulation, 101; substitutes for silica-brick refractories, 436; use of O-enriched blast, 220
Bessemer Process, basic, metallurgy, 437
Bessemer Steel, acid and basic, welding, 441; basic, developments in production of improved types, 220
Betatron, use in production and development of hard X-rays, 336
Beta-Rays, use in thickness measurement of sheets, 335
Bibliography, automatic temperature control, 101; corrosion prevention during processing of high-S crude oil, 451; fumes in metal-treating processes, toxic effects, elimination, 112; geometric irregularities of surfaces, examination, 328; grey-cast Fe, properties, applications, and behaviour, 449; heat-resistant alloys for jet engines, 336; malleable cast Fe, graphitization and properties, effect of elements, 324; quenching steel in salt baths, 224; salt baths for heat-treatment of metals, 223; soluble silicates in refractory industry, applications, 322; temperature control, colorimetric methods, 101; turbidimetric method, particle analysis of metal powders, 331
Billets, chipping, equipment and practice, 221; conditioning, pneumatic hammers, tools, and technique, 221; flame-scarfing, 221; forging, 224; mild-steel, non-metallic inclusions in, examination of distribution, 413 (*Paper*); piercing for seamless tubes, Mannesmann process, 224; round, descaling machine for, 224
Binders, moulding sand, types and properties, 438
Biographies, *Frontispiece, also to face* 120, 240, 344; contributors to *Journal*, 96, 215, 317, 430
Bioptix Pyrometers, design, construction, and applications, 101
Birlec Ltd., heat-treatment furnaces, 108
Birlon, use in protection of polished metals, 230
Blades, gas-turbine, failure, study by statistical methods, 449; hollow, for axial-flow compressors, 325
Blast, O-enriched, use in blast-furnaces, converters, and cupolas, 105, 220, 222
Blast-Furnace Gas, determination of H, 437
Blast-Furnace Metal, desiliconization, 437
Blast-Furnace Practice, 101, 219, 322, 437; desulphurization of Fe, effect of slag, 220; effect of quality of coke, 101; effect of quality of sinter, 219
Blast-Furnace Process, acid, examination, France, 101; effect of coke quality, 101
Blast-Furnace Slag, basic, production by smelting Ti magnetite ore, 102
Blast-Furnace Stoves, improving, 219
Blast-Furnaces, bosh cooling plate, construction, 437; capacity and coke consumption, 101; charge calculations by Mathesius triangular diagram, 322; coke preparation, 321, 435; dimensions and operating data, 101; elimination of S, 220; France, statistics, 237; hearths and linings, demolition, 102; oxidation zone, methods of increasing, 437; preparation of Fe ore, 218; reconstruction, 101; reduction of Fe, effect of operating conditions, 220; refractories for, chemical and mineralogical changes, 436; refractories for, determination of abrasion and impact resistance, 219; refractories for, improving physico-chemical characteristics, 321; refractories for, manufacture at Semiluk Works, 321; smelting Ti magnetite ore for production of basic slag, 102; use of C refractories, 219; use of high top pressure, 101; use of H, 219; use of O-enriched blast, 220

Blue-Prints, preparation and reading, American, Australian, and British methods, 325

Bohemia, Southern, Fe and Ni deposits, geology and origin, 217
Boiler Feed Pumps, corrosion, causes and prevention, 342
Boiler Furnaces, refractories for, 219
Boiler Steel, temper brittleness, 446
Boiler Tubes, corrosion, 340
Boilers, American types, designs and applications, 440; corrosion, causes and prevention, 342; corrosion, prevention, application of electrical deaeration, 235; feed-water, preparation, 455; waste-heat, Clarkson, Cochran, and Spencer-Bonecourt types, operation, 435
Boldalloy Wire-Winding Machine, 225
Bolts, cold-heading, advantages, 225; for use at high temperatures, alloy steel for, properties, 233
Bombs, steel castings for, production, 324
Bonded Assemblies, Al-steel, 111
Bonding, Al to Fe and steel, 329
Book Notices, 119, 238, 343, 456
Boron, effect in steel, 232; in steel, determination by spectrum analysis, 452
Boron Coatings, preparation, static method, 229
Brandes Press, 109
Brazil, foundry products, 107
Brazing, cast Fe, 111; controlled atmosphere heat-treatment furnaces for, 439; furnace-, alloys, technique and precautions, 228; methods, 111; use of induction heating, 327
Bridges, Fe and steel, tests, 449
Brinell Hardness, relationship with tensile strength, 446
Brinell Hardness Tests, applications in foundries, 222
British Furnaces Ltd., heat-treatment furnaces, 108
British Industries Fair, 1948 exhibits of wire-drawing machines and equipment, 225
British Iron and Steel Research Association, comparison of gamma-ray and X-ray methods for testing steel castings, 336; corrosion research, 338; examination of desulphurization of pig Fe in ladles, 323; forthcoming papers for publication, 416; notices of meetings, announcements, and conferences, 97, 431; papers, 37, 46, 57, 72, 151, 164, 169, 177, 261, 271, 276, 286, 295, 367, 376, 381, 388, 415; research on mechanical working and surface treatment of steel, 108; study of corrosion of ships' hulls, 235
British Standard Steel, 968, properties and tests, 326
British Welding Research Association, electric temperature-control methods for laboratory furnaces, 436; recommendations on design of arc-welded mild steel machinery, 326
Brittle Fracture, mathematical examination, 333; mild-steel ship plates, 114; welded pressure vessels, 333
Brittleness, cold, metals, mechanism, 114; cold, welded structures at low temperatures, 114; hot and temper, effect of C, Cr, Mn, and P, 449; mild steel, effect of notch shape, 114; temper, boiler, and rail steels, 446; temper, steel, 116; theory, 114
Broken Hill Proprietary Co., Ltd., cupola charging practice with pig Fe, 222; steel plant, developments, 220
Bronze, properties, effect of Ni, 337
Bronze Alloys, for dies, Ampco 24 type, properties, 440
Bronze-Welding, cast Fe, technique, 228
Bucyrus Erie Co., manual hidden-arc welding, technique and applications, 326
Burners, for atomized oil-fuel firing of open-hearth furnaces, 220; gas, air entrainment, 99; oil, types, and performance, 436
Butt Welding. *See* Welding, butt
C.S.F. Electron Microscopes, use in examination of metal powders, 230
Cables, steel, flexible, properties, 233
Cadmium Coatings, electrodeposited, adhesion of enamel finishes, 330
Cadmium Plating, effect on springs, 229
Calcium, in steel, determination by spectrum analysis, 118
Calcium Carbonate Deposits, formation in corrosion of Fe in soft water, 235
Calorific Value, long-distance gas from Ruhr, fluctuations, 100
Cameras, high-speed, for photographing transfer of metal in welding arcs, 326; X-ray, for examination of crystal structure, 447
Canada, developments in use of O in open-hearth furnaces, 221; foundry practice developments, 324
Capac Bin-aural Equipment, use in acoustic method of surface testing, 447
Capac Co., acoustic method of surface testing, use of Capac Bin-aural equipment, 447
Carbide Phase, isolation under constant conditions, 454
Carbides, in alloy steels, structure, 345 (*Paper*); in austenitic Cr–Mn steel, isolation, 451; cemented, determination of elements by spectrum analysis, 454; Cr and Fe, in Cr–Mn and Cr–Ni steels, determination, 454; grain growth, during isothermal tempering, 117; occurrence in cast Fe and Fe–Si–C alloys, 21; sintered, production and properties, 113; in steel, isolation, 118
Carbon, control in cupola practice, 438; diffusion in austenite, 337; effect on hot and temper brittleness of steel, 449; effect on properties of Fe, 331; in ferrous metals, flue-dust, and slag, determination, 236; in Fe, mechanical effects, 444; in Fe and steel, determination by spectrum analysis, 452; in steel, determination, 236; oxidation in basic open-hearth process, 437; *See also* Refractory Materials
Carbon Brick Linings, for stainless steel pickling tanks, 328
Carbon Dioxide, determination, microchemical diffusion method, 454
Carbon–Molybdenum Steel, creep tests, 448
Carbon Steel, automatic welding at low temperatures, 114; corrosion-fatigue, effect of shot-peening, 164 (*Paper*); creep, 143; effect of H action, 337; effect of Si, 232; graphitization, 336; for high-temperature service, properties, 117; H embrittlement in acid pickling solutions, evaluation, 337; low-alloy, properties, effect of melting practice, 449; production in side-blown converters, 437; properties, effect of Be, 337; properties, effect of forging and rolling, 233; temper hardening, 439; weldability, 227
Carburizing Equipment, gas-, Wild-Barfield type, operation, 439
Carburization, gas-, General Motors Corporation methods, 223; steel, equipment and practice, 223; Fe, study, 223
Carnegie-Illinois Steel Corporation, mobile welding machines for steel plant maintenance, 442; use of O in electric stainless-steel furnaces, Chelius process, 221
Case-Hardened Steel, residual stresses, determination, 439
Cartridge Cases, steel, French production, 325
Cast Iron, alloy, constitution and properties, 323; arc welding, 442; brazing, 111; bronze-welding, technique, 228; for chilled and semi-chilled rolls, types, 105; contraction and distortion, 222; deformation, theory, 445; desulphurization with Mn from blast-furnace slag, 322; effect of Cu, 232; enamelling, causes and prevention of blistering, 230
Cast Iron—*continued.*
grey-, alloyed, endurance limit, effect of heat-treatment, 333; ductility and elasticity, 331; graphite structure, 451; heat-treatment, 104; with high S content, structure, 105; inoculation, 323; microradiography, 450; production control, 323; progress in production, 104; properties, applications, and behaviour, 338, (*with bibliography*) 449; properties, effect of Cu-alloy additions, 449; quality, effect of graphite and Te, 222
heat-treatment, 439; high-quality, production and casting, 222; impact tests, 443; malleable. *See* Malleable Cast Iron; Mo, isothermal transformation, 451; Ni, properties, 338; Ni-hard, production, 105; nodular, properties and production, 222, 338; occurrence of carbides, 21; production of nodular graphite structure, 21, 105; properties, effect of heat-treatment, 338; properties and microstructure, 450; properties, production, and applications, 105, 233; wear, effect of graphite, 334; wear-resistant, production, 105; welding, 327; white, ductility and elasticity, 331; white, graphitization, 440
Cast-Iron Alloys, hardened, for ball-mill linings, 233
Cast Steel, double normalized, equation for prediction of tensile strength from chemical composition, 443; effect of Se on ductility and sulphide inclusions, 449; homogenizing heat-treatment, 439; intergranular fracture, 449; properties at low temperatures, 336
Casting, centrifugal, principles and processes, 439; centrifugal, steel, for aircraft parts, 107; high-quality cast Fe, 222
precision, International Nickel Co. practice, 325; lost-wax process, 106, 107, 324; investment process, principles, 439; theory and practice, 324
Casting-Pit Practice, effect on defects in ingots, 221
Castings, automobile, malleable Fe, cores, 324; automobile, small, collapsible square-mesh wire baskets for handling, 324; design, 437; examination, magnetic powder method, 447; extra large, production, 106; feeding, 106
grey-Fe, for automobiles, repair by welding, 228; control of defects, 107; design, 437; effect of V, 450; inoculation, use of Nisiloy, 105; production, 105; properties, effect of section thickness, 338; welding, 327
high-quality, production, 105; inspection, applications of radiography, 447; Fe–C, metallography, 450; made in synthetic sands, prevention of penetration and veining, 324; malleable Fe. *See* Malleable Iron Castings; non-destructive tests, 325; porous metal, sealing, 325; quality control, 325; removal of cores, measurement of shake-out effort required, 324; shot-peening, 115
steel, for aircraft parts, production, 222; for bombs, production, 324; cleaning, 222; delayed quench heat-treatment, 223; design, 222; flaws, examination and elimination by radiography, 335; hot tears, 325; residual stress relief, 440; segregation, 451; solidification, 439; testing, comparison of gamma-ray and X-ray methods, 336
Cathode-Ray Oscillograph, use in determination of magnetic properties, 335
Cathodic Protection, pipe lines, 342; steel in sea water, use of Mg anodes, 342; theory and mechanism, 342

Chromium, effect on hot and temper brittleness of steel, 449; high-speed electrodeposition, 112
Chromium Carbides, in Cr–Mn and Cr–Ni steels, determination, 454
Chromium Coatings, hard, properties and applications, 229
Chromium-Diffusion Process, applications, 112
Chromium Ferritic Alloys, elasticity, effect of melting *in vacuo*, 331
Chromium–Manganese Steel, austenitic, isolation of carbides, 451; determination of Cr and Fe carbides, 454
Chromium–Molybdenum–Nickel Steel, for aircraft parts, centrifugal casting, 107; heat-treated, magnetic properties, 447
Chromium–Molybdenum Steel, for aircraft parts, centrifugal casting, 107; creep properties, 143; for high-temperature service, properties, 117
Chromium–Molybdenum Steel Ingots, shatter cracks, removal by hot-working, 225
Chromium–Nickel Steel, determination of Cr and Fe carbides, 454; examination, 410 (*Paper*); properties, effect of low temperatures, 336; surfaces, sorption of gases, measurement, 337
Chromium-Plated Rolls, super-finishing, 328
Chromium Plating, thick, industrial applications, 112; use in wear prevention of Diesel-engine cylinder, 229
Chromium Steel, austenitic, intergranular corrosion, 234
Chromizing Process, applications, 112
Cinematography, X-ray interferences, 445
Clad Steel, welding, 327
Clarkson Boilers, waste-heat, operation, 435
Cleaners, gas, electrostatic, determination of efficiency, statistical methods, 100
Cleaning, flame-, steel before painting, 228, 328; Fe and steel, agents and methods, 111; review of literature and patents, 111; steel castings, 222
Coal, composition, properties, and structure, 435; Czechoslovakia 1947, output, consumption, and stocks, 237; drying, 321; fines, drying, use of Reineveld centrifugal drier, 100; mining, American mechanized methods, 435; preparation, American mechanized methods, 435; preparation for coking, 100; thermal expansion, 100; use in United Kingdom, economics, comparison with fuel oil, 100
Coal Pyrites, recovery of S, plant and processes, 100
Coal Deposits, Hungary, explorations 1936–43, 217
Coal Preparation Machinery, German, 218
Coating, steel with Al, 329
Coatings, Al, sprayed, applications, 329; B, preparation, static method, 229; ceramic, for Fe and steel, 330; chemical, for improvement of cold deformation of steel, 109; Cr, hard, properties and applications, 229
electrodeposited, adhesive strength, factors affecting, 228; Cd, adhesion of enamel finishes, 330; porosity, determination, potassium ferricyanide test, 328; thickness determination, 328; types and properties, 228
ethyl cellulose, for protection of tools, properties and application, 230; heat-resistant, properties, 230; lacquer, for stress determination, 114, 333; lacquer-paint, properties and tests, 230
metallic, adherence testing machine for, 228; determination of thickness and weight by chemical and electrolytic dissolution, 228; thickness determination by magnetic method, 228; types and effects, 230
organic, for corrosion protection, 329; on metals, application, 229; for protection of food containers, 230; use in improving adhesion of Zn coatings on steel, 329
paint, adhesion to metals, effect of surface preparation, 330; paint, thickness determination, use of electronics, 231; phosphate, electro-Zn, for Fe and steel, 329; phosphate, on Zn surfaces, application and behaviour, 229; plastic, for protection of polished metals, 230; plastic, for tubes, production by extrusion method, 330; solder, for corrosion prevention of mild-steel tube sheets, 229; sprayed metal, structure, 330; surface, vinyl polymers, 330; for underwater use, evaluation of efficiency by measurement of electrolytic resistance, 230; wear-resistant, methods of application, 229; welding electrode, constitution, 110
Zn, hot-dip, structure, 229; on steel, improving adhesion, use of organic coatings, 329; on wire, tests, 328
Cobalt, in cemented carbides, determination by spectrum analysis, 454 thermal transformations, 451
Cobalt–Tungsten Alloys, electrodeposition, 229
Cobalt–Zinc Alloys, hardening, 113
Cochran Boilers, waste-heat, operation, 435
Coercive Force, determination, tensometric method, 116
Coke, blast-furnace, preparation, 321, 435; constitution and properties, 436; consumption in blast-furnaces, 101; quality, effect on blast-furnace practice and process and cupola practice, 101, 105, 323, 436; reactivity, survey of literature, 100
Coke-Oven Gas, effect of quality on open-hearth practice, 103
Coke-Oven Plant, construction, properties of metals for, 232; Curran-Knowles operation at Michel Colliery, 321
Coke Ovens, chamber walls, surface temperature measurement, 100; instrumentation and control, 100; movable-wall type, for use with low-quality coal, 435; temperature determination, 101
Coking, preparation of coal, 100
Coking Practice, Russia, 435
Cold-Heading, bolts and studs, advantages, 225
Cold Work, effect on H embrittlement of steel, 337
Colorimetric Method, temperature control (*with bibliography*), 101
Columbia University, heat and mass flow analyser, operation and applications, 447
Combustion, chemical and physical theory, 435; in cupolas, thermochemical analysis, 438; gases in Cowper stoves, 322; in open-hearth furnaces, examination, 37 (*Paper*)
Combustion Zone, temperature range, 99
Components, simulated service tests, equipment and methods, 331
Compression Tests, impact, flow of metals, 443
Compressive Properties, perforated cover plates for steel columns, 331
Compressors, axial-flow, hollow blades for, production, 325
Concentration, Fe ore from Alabama, 218; magnetic, Fe ore, 218
Condensers, NH_3, corrosion prevention, 341
Conductivity, electrical, alloys in magnetic field, variations, 446, 447; thermal, refractories, determination, 218
Conical Impression, use in study of effect of speed on deformation resistance of metals, 332
Consett Iron Co., Ltd., Fe and steel plant, renewal, modernization, and extension, 437
Contours, surface, examination, taper-sectioning technique, 328
Contraction, cast Fe, 222
Control, C in cupola practice, 438; coke ovens, 100; corrosion, 234; cupola slag, 105; cupolas, 438; defects in grey-Fe castings, 107; drives in wire manufacture, 440; electric current for arc and resistance welding, 227, 326; electrical, for steel-plant equipment, Rototrol type, 226; electro-hydraulic, for armour-plate presses, 224; electronic and servo electronic, applications in Fe and steel industry, 417; foundry production, 107, 222; grain distribution in moulding sand, 106; grey-cast Fe production, 323; heat-treatment, 107; metallographic, tool steel after heat-treatment, 440; quality, castings, 325; quality, forgings, 108; remote, ingot cars, 226; rolling-mill motors, equipment and operation, 226; temperatures, 100, 436; temperatures, automatic (*with bibliography*), 101; temperatures, colorimetric methods (*with bibliography*), 101; temperatures, electric gas-carburizing furnaces, 101; temperatures of laboratory furnaces, automatic and electric methods, 436; tempering of structural steel during welding, 111
Control Gear, electric, for rolling-mill auxiliaries, 303; for resistance welding, 326
Control Systems, for crane hoists, Thrustor type, 226; for electric power for steel plants, 221
Convection Ovens, conveyor type, for drying paints, operation, 230
Converter Practice, Bessemer, 323; blowing operations, 103
Converter Process, side-blown, production of alloy and C steels, 437
Converters, action of acid slag on refractories, effect of use of O, 103; Bessemer, flame-temperature regulation, 101; Bessemer, substitutes for silica-brick refractories, 436; Bessemer, use of O-enriched blast, 220; side-blown, acid, steel production, 103; side-blown, use of O-enriched blast, 222
Conveyor Systems, belt-, for Fe and steel plants, construction and operation, 185 (*Paper*); Jones and Laughlin Steel Corporation, 223; overhead, for wire mill storehouse, 109; roller, for foundries, 107
Cooling, basic open-hearth furnaces, 103

Copper, in cast Fe and steel, effect on properties, 232, 337; oxidation, effect of texture and crystalline orientation, 234, 235; plating on steel by hot-rolling, 229; in steel, determination, use of steeloscope, 236
Copper-Alloy Additions, effect on properties of grey-cast Fe, 449
Copper-Clad Steel, manufacture and applications, 329
Copper-Oxide Rectifiers, for anodizing and electrodeposition, 228
Copper Pipes, in sea water, corrosion, examination, 343
Cor-Ten, properties and tests, 326; use in American automobile industry, 449
Core Sand, factors affecting behaviour, 324
Core Sand Practice, malleable Fe foundries, 324
Cores, baking, factors affecting, 106; manufacture, 439; oil-sand, gases from, examination and measurement, 324; oil-sand, preparation, 106; production in India, 106; removal from castings, measurement of shake-out effort required, 324; strainer, design, 106
Corronizing Process, Ni–Sn and Ni–Zn, properties and applications, 113
Corrosion, 118, 234, 338, 451; alloys and metals by methyl alcohol, 341; NH_3 condensers, prevention, 341; anaerobic, Fe pipes in soil, 342, 343
atmospheric, Fe and steel, 339; Fe and steel wires, 276 (*Paper*); overhead lines, 235
bearings, kinetics, 118; benzole-absorption plants, 341; boiler feed pumps, causes and prevention, 342; boilers, causes and prevention, 342; boilers, prevention, application of electrical de-aeration, 235; Cu pipes in sea water, examination, 343; electrochemistry, 118, 451, 452; equipment for chemical industry, 339; equipment for isomerization of hydrocarbons, 341; erosion, alloys, 340; food containers, 340; fretting, theory and mechanism, 343; heat-resistant alloys for gas turbines, 343; intercrystalline, steel, by nitrates, 234; intergranular, austenitic Cr steel, 234; internal, detection by gamma rays, 339; internal combustion engine exhaust pipes, 235; Fe in acid atmospheres, 339; Fe in soft water, formation of $CaCO_3$ and silica deposits, 235; Fe in sulphuric acid plants, 339; marine structures and ships' hulls, protection, 330; materials by molten substances, 452; measurements, use of galvanic couple, 340
metals, effect of surface condition, 234; in ethylene glycol solutions, electrochemical study, 452; by F_2, 339; by HCl at high temperatures, 339; theory and types, 338, 339; by water-in-oil emulsions, protection by Redox system, 118
mild-steel tube sheets, prevention, use of solder coatings, 229; oil refinery gas storage tanks and pressure vessels, effect of H, 342; oil well equipment, 340; open-hearth ladle nozzles, mechanism, 221; petroleum industry, 341; pipe lines, causes and prevention, 342; prevention in packaged goods, 451; prevention during processing of high-S crude oil (*with bibliography*), 451; protection, use of organic coatings, 329; protection, use of porcelain enamel, 342; research, British Iron and Steel Research Association, 338; research, Sweden, 338; ships' hulls, 235, 330; stainless steel, relationship with welding, 340; steel, by town gas, effect of NH_3 and HCN, 339; steel in sea water, 118; steel plates by soil, New Zealand, 235; steel water tanks, electric protection, 342; by sulphides, prevention, 341; tubes in hot and cold water systems and boilers, 340; turbine pumps, 451; types, causes, and control, 234; underground pipe lines, 235, 451; water pipes, 235
Corrosion Cracking,
stress, Fe and steel 338, 339; mild-steel, 235; prevention, 234
Corrosion-Fatigue, C steel, effect of shot-peening, 164 (*Paper*)
Corrosion Inhibitors, 118; use of linseed meal, 118
Corrosion Resistance, atmospheric, phosphatized steel, 339; high-alloy steels in industrial atmospheres, 367 (*Paper*); stainless steel, 340; stainless-steel paint, 330
Corrosion Testing Station, marine, 343
Corrosion Tests, 118; atmospheric, accelerated type, 286 (*Paper*); atmospheric, low-alloy steels, 234; insulated tubes, 230; oil distillation equipment, 341
Corundum. *See* Refractory Materials
Costs, arc welding, 111; forging, 224; galvanizing, effect of tank capacity, 229; induction-heating in forge furnaces, 225; powder metallurgy, 230; production, of Edelstahl, 323
Counter-Electrodes, use in spectrum analysis of steel, 453
Cover Plates, perforated, for steel columns, compressive properties, 331
Cowper Stoves, combustion and flow of gases, 322; use as heat accumulators, 101; varying-turbulence, efficiency tests, 131 (*Paper*)
Cracking, hot, welds, 110
stress-corrosion, Fe and steel, 338, 339; mild-steel, 235; prevention, 234
Cracks, bore, in steel fittings and valve bodies, causes and elimination, 439; detection methods, 447; detection, use of electronics, 231; detection by gamma rays and X-rays, 336; in ingots, study by statistical methods, 221; shatter, in Cr–Mo steel ingots, removal by hot-working, 225. *See also* Defects; Flaws
Crane Hoists, control systems. Thrustor type, 226
Crane Runways, for open-hearth furnaces, design and construction, 441
Crank Presses, maintenance 225
Crankshafts, forging, 224; steels for, fatigue tests, 333
Creep, in C, Mo, Cr–Mo, and Mo–V steels, 143; metals, 336, 448; transient, theory, relation with dislocation, 444
Creep-Resistant Steel, for gas turbines, 336
Creep Strength, Fe–Nb and Fe–Ti alloys, 448; steel, effect of Ti, 117
Creep-Testing Machines, 117, 336; combined with X-ray spectrometer, construction and use, 336
Creep Tests, Mo–C steels, 448; heat-resistant steels, 448; on ring-shaped and cylindrical specimens for bending and stretching, 336
Critical Point, in steel refining, determination, 103
Crushing, Fe ore, theory and practice, 217
Crystal Structure, X-ray cameras for examination, 447
Crystalline Orientation, effect on oxidation of Cu and Fe, 234, 235
Crystallization, steel ingots, 233
Crystals, deformation, by motion of single ions, 444; goniometric orientation, 448
Cupola Hot Metal, use in open-hearth practice, 221
Cupola Iron, composition, properties, and microstructure, 450
Cupola Practice, 323, 438; C control, 438; constant charge system, 105; effect of quality and type of fuel, 105, 323, 436
Cupola Slag, control, 105
Cupolas, charging practice, use of pig Fe, 222; combustion, thermochemical analysis, 438; control, 438; design and practice, 438; formula for calculation of melting rate, 438; heat recuperation, 438; improvements in design, 220; refractories, maintenance, 438; refractories, standardization, 322; use of anthracite, 323, 438; use of O-enriched blast, 105
Curran-Knowles Coke-Oven Plant, operation at Michel Colliery, 321
Cutting, continuous and intermittent processes compared, 111; metals, electro-erosion method, 327, 328; oxy-acetylene, steel, supplementary treatment, 442; stainless steel, oxy-acetylene powder method, 327; uses of O, 111
Cutting Edges, sharpness, measuring, 328
Cutting Tools, high-speed, failures and methods of improving life, 327; production by welding, 110
Cyaniding, gas-, small parts, equipment and process, 439
Cylinder Blocks, cast-Fe, for Diesel engines, stress-relieving furnaces for, 440
Cylinder Liners,
Diesel-engine, wear, effect of S, 340; wear, prevention, use of Cr plating, 229
Cylindrical Furnaces, refractories for, 219
Czechoslovakia, coal, output, consumption, and stocks, 1947, 237

Damping, measurement by vibration, 232
Dana Corporation, induction heating of automobile axle shafts, plant and practice, 223
Davy and United Engineering Co., Ltd., plant extensions and developments, 323
De-Aeration, electrical, for corrosion prevention in boilers, 235
Debye-Scherrer Method, X-ray diffraction, for determination of lattice parameters and stresses, 335
Decarburization, steel, 107
Decomposition,
austenite, examination, magnetometric method, 233; by nucleation and growth processes, 451
Deep-Drawing, metals, 225; strain measurement, 225
Defects, grey-Fe castings, control, 107; ingots, effect of casting-pit practice, 221
surface, detection by electron microscopes, 336; ingots, causes, 107, 139, 169 (*Paper*); ingots, effect of teeming time, 295 (*Paper*); rolled steel products, determination of origin, 450
welds, causes, 111; *See also* Cracks; Flaws
Deformation, cold, steel, improvement, use of chemical coatings, 109; cast Fe, theory, 445; crystals, by motion of single ions, 444; effect on Mo permalloy and transformer steels, 446; elastic and plastic during welding, 111; liquid and solid bodies, laws, 115; metals, effect of degree on stress–speed relationships, 333; Ni–Fe, relationship with recrystallization, 334
plastic, effect on change of lattice parameter, 231; effect on elastic properties of non-ferrous metals and stainless steel, 231; rolling of metals, 226; theory, 332; in wire drawing, theory, 225
plates during welding, 110
Deformation Resistance, metals, study of effect of speed, use of conical impression, 332
Degreasing, metals, theory and practice, 328; literature and patents, 111
Density, liquid metal and slag in Fe–Cr–W system, 323
Department of Mines and Resources, Ottawa, creep-testing machines, 336
Descaling, electrolytic, steel, 328; plates and sheets, salt baths for, 112
Descaling Machine, for round billets, 224
Desiliconization, blast-furnace metal, 437

Desulphurization, cast Fe with Mn from blast-furnace slag, 322; Fe in blast-furnaces, effect of slag, 220; in Fe–Mn system, effect of acid slags, 221; pig Fe in ladles, 323
Diary, events for October 1948–January 1949, 98, 216, 320, 434
Dictionary, German, terms used in Fe and steel production, 120
Die-Forging, time studies, 225
Die-Polishing Machine, Kneller type, 225
Die Steel, graphitic and oil-hardening, galling tests, 449; hardening processes, effect of alloying elements, 338; precipitation-hardened, properties, 449
Dielectric Heating, theory and applications, 440
Dies, Ampco 24 bronze alloy for, properties, 440; forging, design, 108, 109; forging, methods of increasing life, 108; Kirksite, for automobile stampings, 108; press, for special shapes, 108; progressive, for high-speed production of stampings, 109; wire-drawing, calculation of reductions, 225; wire-drawing, design, 440
Diesel-Engine Cylinder Blocks, cast-Fe, stress-relieving furnaces for, 440
Diesel-Engine Cylinder Liners, wear, effect of S, 340; prevention, use of Cr plating, 229
Diesel-Engine Piston Rings, wear, effect of S, 340
Diffusion, in basic arc process, 437; C in austenite, 337; N into Fe, effect of grain size, 337
Dilatometric Analysis, methods, 232
Dimethylglyoxime, use in determination of Ni, 118
Dinas Bricks. *See* Refractory Materials
Disease, among welders, effects of welding armour plates with low-alloy electrodes, 442
Disks, for aircraft gas turbines, forging, 109
Dislocation Theory, fatigue of metals, 445
Dislocations, dynamic behaviour, effect on development of slip bands, 444; effect of solute atoms on behaviour, 444; theory, relationship with transient creep, 444
Dispersion Analysis, use of supercentrifuge, 455
Distillate Wells, oil, corrosion of Ni-plated tubes, 341
Distillation Equipment, oil, corrosion tests, 341
Distortion, cast Fe, 222
Dortmund Hörde Hüttenverein, H.P.N. steel, production, 322
Double-Blowing Process, production of H.P.N. steel, 322
Douglas Aircraft Co., performance of Planeweld AWF 144–4130 welding rod, 441
Drawing, back-pull, calculation of power requirements, 440; deep-, metals, 225; deep-, strain measurement, 225; examination of specific pressure of flow of metal, 440; lubrication and requirements of lubricants, 109
wire, drawing compounds and lubricants, 225; equipment and processes, 225; practice in Warrington district, 363 (*Paper*); Siebel and Kobitzsch formula for determination of temperature increase, 225; temperature distribution, 440; theory of plastic deformation, 225; theory of unit compressive stress, 440
Drawing Compounds, for wire-drawing, 225
Drawing Properties, low-alloy high-tensile steel, 338
Drill-Pipes, non-destructive tests, 116
Drills, for mining, manufacture, 109
Drop-Forging, high-pressure valves, 109
Drop Method, application in quantitative analysis of alloys, 119
Drying, coal, 321; coal fines, use of Reineveld centrifugal drier, 100; industrial, by infra-red heating, theory, equipment, and practice, 229; moulding sand, use of Lennox drier, 106; paints, operation of conveyor convection ovens, 230
Ducol Steel, W.24 and W.27, properties and tests, 326
Ductility, cast steel, effect of Se, 449; grey and white cast Fe, 331
Duplex System, production of stainless-steel ingots, 104
Dust, flue-, determination of C, 236; foundries, removal systems, 325
Dust Collectors, types and operation, 439
Dust Extraction Plant, flame-spraying, 230
Dynamic Hardness, determination, use of double-pointed cone, 446
Dynamic Yield Stress, determination, 443

Ealing Park Foundry Ltd., foundry practice, 323
Eaton Manufacturing Co., foundry transport equipment, 324
Ebbw Vale Metallurgical Society, notice, 318
Economics, comparison of use of coal and oil fuels in United Kingdom, 100; Fe and steel industry, 237, 454; Fe ore smelting methods, 437
Edelstahl, properties and production costs, 323
Efco-Hultgren Salt Baths, 108
Efficiency Tests, varying-turbulence Cowper stoves, 131 (*Paper*)
Elastic Deformation, during welding, 111
Elastic Limit, mild steel, 443
Elastic Properties, non-ferrous metals, effect of heat-treatment and plastic deformation, 231; steel, effect of composition, 115
Elastic-Viscous Properties, disperse systems, 115
Elasticity, Cr ferritic alloys, effect of melting *in vacuo*, 331; grey and white cast Fe, 331; photo-, developments and applications, 445
Electric Control Gear, for rolling-mill auxiliaries, 303
Electric Current, for arc and resistance welding, control, 227, 326; high-frequency, applications to hard-facing by welding, 228; three-phase, apparatus and circuits for application to welding transformers, 227
Electric Driving, rolling-mill motors, 226; wire-drawing machines, 109
Electric Furnace Practice, America and Europe compared, 323; arc, 323
Electric Furnace Process, basic-arc, diffusion, 437
Electric Furnaces, arc, basic, use of O, 221; arc, linings, improvements in design, 104; arc and high-frequency, comparison of losses, 104; for ceramic industry, 108; enamelling of metals 330; France, statistics, 237; gas carburizing, temperature control, 101; high-frequency, for melting, 104; for melting, types and selection, 104; for production of stainless steel, use of O, Chelius process, 221; rammed refractories for, 322
Electric Motor Parts, grey cast Fe, moulding practice, 106
Electric Motors, rolling-mill, drives and controls, 226
Electric Power, for steel plants, control systems, 221
Electric Protection, steel water tanks against corrosion, 342
Electric Smelting Processes, types and applications in India, 221
Electric Steel, American production, 103
Electrical Conductivity, alloys in magnetic field, variations, 446, 447
Electrical Control, for steel-plant equipment, Rototrol type, 226
Electrical De-Aeration, for corrosion prevention in boilers, 235
Electrical Equipment, for wire-drawing machines, 109
Electrical Machinery, in Fe and steel plants, maintenance, 425
Electrical Resistance, Fe–Cr–C alloys, at high temperatures, 447
Electricity, in Sn plate manufacture, 113
Electrochemistry, corrosion, 118, 451, 452
Electro-Erosion Method, cutting of metals, 327, 328
Electrode Coatings, welding, constitution, 110
Electrodeposited Coatings, adhesive strength, factors affecting, 228; Cd, adhesion of enamel finishes, 330; porosity, determination, potassium ferricyanide test, 328; thickness determination, 328; types and properties, 228
Electrodeposition, Cr, high-speed, 112; Co–W, Fe–W, and Ni–W alloys, 229; Cu-oxide rectifiers for, 228; metals, determination of effect of inter-electrode distance, 112; Ni, 112; Zn on Fe, 328
Electrodes, counter-, use in spectrum analysis of steel, 453; stainless-steel, use in welding dissimilar metals, 326
welding, arc, manufacture in Germany, 326; Swedish, constitution, properties, and performance, 110; tests, 441; types, constitution, behaviour, 442
Electro-Hydraulic Control, for armour-plate presses, 224
Electrolysis, fusion, for production of metal powders, 231
Electrolytic Descaling, steel, 328
Electrolytic Dissolution, for determination of thickness and weight of metallic coatings, 228
Electrolytic Pickling, comparison with chemical, 228
Electrolytic Polishing, 112, 239 (*Book*), 450; small parts, apparatus and processes, 112; stainless steel, 112
Electrolytic Resistance, measurement, use in evaluation of efficiency of coatings for underwater use, 230
Electrolytic Tinning, process and applications, 113
Electrometric Method, determination of V in steel, 454
Electron Microscopes, C.S.F. type, use in examination of metal powders, 230; design and construction, 450; for detection of surface defects, 336; examination of sintering of magnesia, 219; Metropolitan-Vickers EM3 type, 117; for roughness measurement, 328
Electron Microscopy, correlation with optical microscopy, 450; technique, 450
Electronic Comparators, principles and applications, 335
Electronic Control, applications in Fe and steel industry, 417
Electronic Measurement, principles and technique, 114
Electronic Micrometer, operation, 328
Electronics, use for detection of cracks and determination of thickness of paint coatings, 231
Electro-Physical Properties, ferromagnetic alloys, 116
Electropotentials, growing halides and oxides on metals at high temperatures, measurement, 343
Electrostatic Gas Cleaners, determination of efficiency, statistical methods, 100
Electrostatic Process, paint spraying, developments, 330
Electrotinning Plant, Ferrostan process, Richard Thomas and Baldwins, 329
Elements, in Fe, solubility, 233; in steel, determination by spot tests, 235; in steel, separation by pyridine, 236
Elongation, austenitic steel at low temperatures, 443
Embrittlement, H, C steel in acid pickling solutions, evaluation, 337; H, steel, effect of cold work, 337; pickling, steel, factors affecting, 337
Emulsions, water-in-oil, corrosion of metals, protection by Redox system, 118
Enamel, adhesion on electrodeposited Cd coatings, 330; porcelain, use in corrosion protection, 342; Ti, preparation and properties, 230
Enamelling, cast Fe, causes and prevention of blistering, 230; metals in electric furnaces, 330; steel baths, 230

Pipes, butt-welding, 327; Cu, in sea water, corrosion, examination, 343; for drills, non-destructive tests, 116; exhaust, internal combustion engines, corrosion, 235; graphitization, 232; Fe, in soil, anaerobic corrosion, examination, 342, 343; manufacture of malleable fittings for brazed joints, 442; pressure, welds, radiographic examination, 441, 442; steam, welded, graphitization, 232; water, corrosion, 235; welded, forming, 224; *See* also Tubes
Piston Rings, Diesel-engine, wear, effect of S, 340
Pittsburgh-Eric Process, for rehabilitation of corroded pipe lines, 342
Pittsburgh International Conference on Surface Reactions, 344 (*Book*)
Planeweld AWF Welding Rod, 144-4130 type, performance, 441
Plastic Coatings, for protection of polished metals, 230; for tubes, production by extrusion method, 330
Plastic Deformation, during welding, 111; effect on change of lattice parameter, 231; effect on elastic properties of non-ferrous metals and stainless steel, 231; rolling of metals, 226; theory, 332; in wire drawing, theory, 225
Plastic Flow, theory, 332
Plastic Replicas, in analysis of surfaces, 233
Plastic Twisting, determination of stresses, 445
Plasticity, theory, determination, 114, 332
Plates,
armour, presses for, modernization, use of electro-hydraulic control, 224; welding with low-alloy electrodes, disease effects on welders, 442; welds, radiographic examination, 442
cover, perforated, for steel columns, compressive properties, 331; deformation during welding, 110; descaling, salt baths for, 112; elastic and plastic strain energies, variations, 231; machinery for, automatic lubrication, 110; mild-steel, for ships, brittle fracture, 114; steel, corrosion by soil, New Zealand, 235
Plating, Cd, Sn, and Zn, effect on springs, 229; Cr, thick, industrial applications, 112; Cr, use in wear prevention of Diesel-engine cylinder liners, 229; Ni, by immersion in $NiCl_2$ solutions, 229; steel with Cu by hot-rolling, 229; strip, mechanism for control of tension and velocity, 328
Plating Liquors, spent, reclamation and use, 112
Plessey Co., Ltd., electron microscopes, design and construction, 450
Pneumatic Hammers, for conditioning billets, 221
Poland, Fe and steel industry, reconstruction, 237; mineral deposits, 217
Polariscope, photo-elastic, design and applications, 114
Polarographic Method, determination of Pb in steel, 235
Poldi Works, hardness testing machine, 334
Polishing, electrolytic, 112, 239 (*Book*), 450; electrolytic, small parts, apparatus and processes, 112; electrolytic, stainless steel, 112
Polishing Machine, die-, Kneller type, 225

Polycrystalline Aggregates, preferred orientation, study by X-ray goniometer, 118
Polymorphism, Fe, effect of elements, 451
Porcelain Enamel Institute, research on applications of porcelain enamel for corrosion protection, 342
Porosity, electrodeposited coatings, determination, potassium ferricyanide test, 328
Porosity Test, thiocyanate, tinplate, examination, 376 (*Paper*)
Potassium Ferricyanide Test, for determination of porosity of electrodeposited coatings, 328
Potentiometric Method, determination of Mo and V in steel, 236
Pouring Gates, design, application of hydraulic analysis, 106
Pouring Rate, effect of gating system, 106
Powder, hardening, Hi-Speed-It type, 224
Powder Metallurgy, 113, 230, 331, 442; moulds, designs and improvements, 331; processes, costs, and applications, 230; processes for Fe, 113; production of high-temperature alloys, 113; production of permanent magnets, 230
Powdered Iron, electrolytic, sintering, 442; production from sponge Fe, 230; sintering, effect of time and temperature, 331; soft, sintering for preparation of steels, 113
Powdered-Metal Compacts, pressing, effect of friction between particles and die walls, 113; unequal changes in shape during sintering, 442
Powdered-Metal Parts, properties and tests, 442
Powders,
metal, compressed, theory and behaviour, 331; examination by C.S.F. electron microscope, 230; particle analysis, turbidimetric method (*with bibliography*), 331; pressing, theory and practice, 230; production by fusion electrolysis, 231
Power, requirements for rolling, 225
Precision Casting. *See* Casting, precision
Press Dies, for special shapes, 108
Press Tools, sintered carbide, production and uses, 325
Presses, for armour plate, modernization, use of electro-hydraulic control, 224; Brandes type, 109; for cranks, maintenance and repair, 225; forging, design, construction, and developments, 224, 325; forging, exhaust steam for, 440; hydraulic, 109; for stamping rails, 109; tube, mandrels for, types, production, and performance, 325
Pressing, metal powders, theory and practice, 230; powdered-metal compacts, effect of friction between particles and die walls, 113
Pressure, specific, flow of metal during drawing, examination, 440
Pressure Vessels, examination, 232; for oil refineries, corrosion, effect of H, 342; welded, brittle fracture, 333
Pre-Stressing, springs, 338
Printing, on tinplate, machines and processes, 329
Producer Gas, moisture determination, 235
Producers, low-temperature, proposed construction in Germany, 100; sizes, types, and cast, Wellman Engineering Co., 100
Pumps, boiler feed, corrosion, causes and prevention, 342; turbine, corrosion, 451
Pyridine Method, separation of elements in analysis of alloy steels, 236
Pyrites, coal, recovery of S, plant and processes, 100; roasted, use in pig-Fe production in Hungary, 102
Pyritic Sulphur, determination, 453
Pyrometers, Bioptix type, design, construction, and applications, 101; recording, improvement of temperature compensation, 101
Pyrometry, 436; optical, in steel plants, effect of smoke and atmospheric absorption, 271 (*Paper*)

Quality, coke, effect on blast-furnace practice and process and cupola practice, 101, 105, 323, 436; coke-oven gas, effect on open-hearth practice, 103; fuel, effect on cupola practice, 105, 323; grey-cast Fe, effect of graphite and Te additions, 222; rimmed steel, factors affecting, 104; sinter, effect on blast-furnace practice, 219; steel, effect of furnace linings, 219; transformer steels, methods for improving, 108
Quality Control, castings, 325; forgings, 108
Quantitative Analysis, alloys, application of drop method, 119
Quebec, New, hematite deposits, 217
Quenching, automobile spring leaves, submarine process, 224; steel in salt baths (*with bibliography*), 224
Quenching Oil, properties, 224

Radioactive Isotopes, sources in radiography, 448
Radio-Frequency Generator, chart for determination of size, 439
Radiographic Examination, acceptance standards, 448; welds in armour plate, 442; welds in pipe lines for steam turbines, 442; welds in pressure pipes, 441, 442; welds in ships, 441
Radiographical Laboratory, Chatham Dockyard, 117
Radiography, application to inspection of castings, 447; effect of field size on contrast and exposure, 448; for examination and elimination of flaws in steel castings, 335; gamma-ray, foundry applications, 448; micro-, grey-cast Fe, 450; principles, technique, and applications, 335; radioactive isotopes as sources, 448
Rail Steel, temper brittleness, 446
Rails, stamping presses for, 109; wear, 334; worn, building-up by welding, 442
Railway Equipment, construction and maintenance, applications of submerged-arc and gas-shielded arc welding, 326
Railway Wagons, welded, building, use of jigs, 110
Razor Blades, sharpness, measurement, 328
Reactivity, coke, survey of literature, 100
Recirculating Furnaces, heat transfer, 99
Recrystallization, Ni–Fe, relationship with deformation, 334; theory and factors affecting, 444
Rectifiers, Cu-oxide, for anodizing and electrodeposition, 228
Recuperators, operation, effect on furnace efficiency, 435
Redox System, protection of metals from corrosion by water-in-oil emulsions, 118
Reduction, direct, Fe ore, processes, 220; Fe in blast-furnaces, effect of operating conditions, 220; in wire-drawing dies, calculation, 225
Reed Roller Bit Co., forging practice, 109
Reflectogage, use in supersonic detection of flaws in steel, 335
Reflectoscope, use in supersonic detection of flaws in steel, 335
Refractory Industry, applications of soluble silicates (*with bibliography*), 322
Refractory Linings, for jet engines, 322
Refractory Materials, 218, 321, 436; American, permeability, 436; basic, for open-hearth furnaces, consumption, 322; Bessemer converters, substitutes for silica-brick, 436
blast-furnaces, chemical and mineralogical changes, 436; determination of abrasion and impact resistance, 219; improving physicochemical characteristics, 321; manufacture at Semiluk Works, 321

Refractory Materials—*continued.*
boiler furnaces, 219; in converters, action of acid slag, effect of use of O, 103; cupolas, maintenance, 438; cupolas, standardization, 322; cylindrical furnaces and rotary kilns, 219; determination of growth and shrinkage, 321; high-alumina, manufacture, 321; Fe and steel industry, types and properties, 321; manufacture in Germany, 218; open-hearth furnace bottoms, 219; open-hearth furnace bottoms, slag reactions, 219; properties, manufacture, and applications, 218, 436; rammed, for electric furnaces, 322; reheating furnaces, 219, 224; silicate, relationship between properties and composition, 436; special types, 436; thermal conductivity, determination, 218; for use with O firing, 436
Refractory Materials (Andalusite), properties, 218
Refractory Materials (Carbon), use in blast furnaces, 219
Refractory Materials (Chromite), heat resistance, 322
Refractory Materials (Chromite-Dolomite), performance, 322
Refractory Materials (Corundum), constitution and properties, 436
Refractory Materials (Dinas Bricks), manufacture in Germany, 218; properties and firing, 218
Refractory Materials (Firebricks), for open-hearth furnace back walls, performance, 322
Refractory Materials (Forsterite), properties, 322
Refractory Materials (Magnesia), sintering, examination by electron microscope, 219
Refractory Materials (Magnesite), heat resistance, 322; structure, 219
Refractory Materials (Silica Bricks), manufacture, 218; manufacture from Osokarov quartzite deposits, 321; properties, performance, and tests, 218 (*with bibliography*), 436; properties of raw materials for, 219
Refractory Materials (Silico-Aluminous Bricks), effects of firing, 321
Regenerator Packings, Fräukl type, 99
Regenerators, as heat accumulators, 101
Reheating Furnaces, refractories for, 219, 224; types, 107
Reichswerke A.G., steel plant, developments, 220
Reineveld Drier, centrifugal, for drying coal fines, 100

Vibration Method, for measurement of damping, 232
Vinyl Polymers, in surface coatings, 330
Viscosity, Fe–C alloys, 337; liquid metal and slag in Fe–Cr–W system, 323; wire, measurement by torsional oscillation method, 117
Volumetric Method, determination of Mo in steel, 118
Voss-United Sheet Levelling Machine, 226

Warrington, wire-drawing practice, 363 (*Paper*)
Washburn Risers, 324
Water, boiler feed-, preparation, 455; soft, corrosion of Fe, formation of $CaCO_3$ and silica deposits, 235
Water-in-Oil Emulsions, corrosion of metals, protection by Redox system, 118
Water Pipes, corrosion, 235
Water Systems, hot and cold, corrosion of tubes, 340
Water Tanks, steel, corrosion, electric protection, 342
Wealden Iron Industries, northern extension, historical note, 245 (*Paper*)
Wear, cast Fe, effect of graphite, 334; Diesel-Engine cylinder liners, prevention, use of Cr plating, 229; Diesel-engine cylinder liners and piston rings, effect of S, 340; metals, causes and measurement, 446; rails, 334; steel, mechanism and reduction, 334
Wear Gauges, McKee, applications, 116
Wear Resistance, stainless-steel paint, 330
Wear-Resistant Cast Iron, production, 105
Wear-Resistant Coatings, methods of application, 229
Webster B Hardness Testing Machines, 334
Weirton Steel Co., steel plant, 103; use of O in Fe and steel production, 220
Weld Metal, mild-steel, inclusions, thermodynamical analysis, 29; sulphide inclusions, determination, 454
Weldability, alloy and C steels, 227; metals, estimation by resistance test, 326
Weldability Tests, steel, 114
Welded Beams, butt-, residual stresses, 443
Welded Machinery, arc-, mild-steel, design, 326
Welded Pipes, forming, 224; steam, graphitization, 232
Welded Pressure Vessels, brittle fracture, 333
Welded Railway Wagons, building, use of jigs, 110
Welded Specimens, bend tests, effect of bending angle and thickness, 327
Welded Steel, brittle transition temperature, 227
Welded Structures, cold brittleness at low temperatures, 114; locked-up stresses, avoidance and reduction methods, 227; residual stresses, 326; specifications, Institut Belge de Normalisation, 228; steels for, properties, tests, and developments, 326
Welded Tubes, seamless, production, 227; seamless, strength, effect of welding variables, 232
Welders, disease, effects of welding armour plates with low-alloy electrodes, 442; duties, 110
Welding, acid and basic Bessemer steel, 441; in America and Great Britain, developments, 110; applications for chemical industry, 227; applications in repair of steel-plant equipment, 327
arc, cast Fe, 442; costs, 111; current control, 326; for deposition of high-Mn steel, 227; gas-shielded and submerged methods, applications in construction and maintenance of railway equipment, 326; hidden-, technique and applications, 326
armour plate with low-alloy electrodes, disease effects on welders, 442; automatic, C steel at low temperatures, 114; automatic, under flux, 110; bronze-, cast Fe, technique, 228; for building-up worn rails, 442
butt, in chain manufacture, 327; pipes, 327; steel rings, 110
with C electrodes and fluxing powder, 441; cast Fe, 327; clad steels, 327; contact method, 326; dissimilar metals, use of stainless-steel electrodes, 326; effect of materials on fields and voltages of welder throat, 228; elastic and plastic deformation, 111; German practice, 326; grey-Fe castings, 327; for hard-facing, applications of high-frequency currents, 228; for hard-facing of worn parts, 326; heliarc process, 110; hidden-arc process, equipment and practice, 227; metals, with separate melting processes, 227; plates, deformation, 110; for production of cutting tools, 110; for reconditioning rolls, 110; for repair of grey-Fe automobile castings, 228; resistance, electric current control, 227, 326; stainless steel, 111; stainless steel, relationship with corrosion, 340; stainless-steel filters, 442; stainless-steel sheets, 442; stainless-steel
Welding—*continued.*
sheets, Fuller Carbo-Flux method, 227; steel, metallurgy, 227; structural steel, control of tempering, 111; submerged-melt process, 227; technique, rules, 326; uses of O, 111; with 3-phase arc, 326
Welding Arc, photography of transfer of metal, high-speed camera for, 326
Welding Electrodes, arc-, manufacture in Germany, 326; coatings, constitution, 110; Swedish, constitution, properties, and performance, 110; tests, 441; types, constitution, behaviour, 442
Welding Loads, effects on voltage changes, 227
Welding Machines, A.C., design and operation, 326; arc, hidden, Manual Lincolnweld type, 326; arc, hidden, operation, 441; arc, manufacture in Germany, 326; mobile, for steel plant maintenance, 442; resistance, automatic, developments, 326
Welding Rod, Planeweld AWF 144–4130 type, performance, 441
Welding Tools, resistance-, electrical measurement and induction calculation, 228
Welding Transformers, apparatus and circuits for application of three-phase current, 227
Welding Variables, effect on strength of welded seamless tubes, 232
Welds, in armour plate, radiographic examination, 442; butt, mild steel, properties and tests, 441; butt, in oil pipe lines, X-ray examination, 448; defects, causes, 111; fatigue strength, 441; fatigue tests, 333; hot cracking, 110; impact tests, 443; magnetic examination, 447; in pipe lines for steam turbines, radiographic examination, 442; in pressure pipes, radiographic examination, 441, 442; residual stress relief, 440; in ships, radiographic examination, 441; stresses, 441; supersonic and ultrasonic tests, 335; X-ray examination, equipment and methods, 228
Wellman Engineering Co., gas producers, 100
Westinghouse Electric Corporation, use of anthracite in cupolas, 438; moulding practice for grey cast Fe electric motor parts, 106
Wetting, effect on fatigue strength of steel, 231
Wheeling Steel Corporation, direct oxidation in open-hearth process, 221
Wheland Co., foundry practice, 324
White Cast Iron. *See* Cast Iron, white
Wilberg Process, direct reduction of Fe ore, 220
Wild-Barfield Electric Furnaces, Ltd., gas-carburizing equipment, operation, 439
Wire,
drawing, drawing compounds and lubricants, 225; equipment and processes, 225; practice in Warrington district, 363 (*Paper*); machines and equipment, British Industries Fair, 1948 exhibits, 225; Siebel and Kobitzsch formula for determination of temperature increase, 225; temperature distribution, 440; theory of plastic deformation, 225; theory of unit compressive stress, 440
fatigue tests, rotating-beam method and equipment, 333; fine, tensional and electrical resistance, simultaneous measurement, 335; Fe and steel, atmospheric corrosion, 276 (*Paper*); manufacture, control of drives, 440; properties of materials, 338; straightening machine for, Barco type, 226; viscosity, measurement by torsional oscillation method, 117; Zn coatings on, tests, 328
Wire Baskets, collapsible square-mesh, for small automobile castings, 324
Wire-Drawing Dies, calculation of reductions, 225; design, 440

Wire-Drawing Machines, electric driving and equipment, 109
Wire Mills, organization of inspection and despatch, 225 ; storehouse, overhead conveyor system for, 109
Wire-Winding Machine, Boldalloy type, 225
Woodall-Duckham Co., laboratories, 436
Work-Hardening, in metals, theory, 444
Working Properties, alloy steels, 334
Worm Gears, for rolling mills, 226
Worn Parts, hard-facing by welding, 326
Worn Rails, building-up by welding, 442

X-Ray Back Reflection Measurements, effect of temperature, 335
X-Ray Cameras, for examination of crystal structure, 447
X-Ray Diffraction, Debye-Scherrer method for determination of lattice constants and stresses, 335 ; for examination of internal stresses in metals, 115
X-Ray Equipment, Ford Motor Co., 335 ; for stress analysis, 445
X-Ray Examination, butt welds in oil pipe lines, 448 ; crystal structure, cameras for, 447 ; welds, equipment and methods, 228
X-Ray Goniometer, for study of preferred orientation in polycrystalline aggregates, 118
X-Ray Interferences, cinematography, 445
X-Ray Laboratories, Chatham Dockyard, 117
X-Ray Method, for determination of surface stresses in metals, 334
X-Ray Spectra, relative intensities of lines, determination, 447
X-Ray Spectrometer, combined with creep-testing machine, construction and use, 336
X-Ray Stress Determinations, application of interference counters, 445
X-Rays, for crack detection, 336 ; hard, production and development, use of betatron, 336 ; for testing steel castings, comparison with gamma-rays, 336 ; use in thickness measurement of strip during hot-rolling, 335

Yield, metals, theory, 444
Yield Stress, dynamic, determination, 443
Yoloy, use in American automobile industry, 449
Youngstown Sheet and Tube Co., preparation of blast-furnace coke, 435

Zinc, electrodeposition on Fe, 328
Zinc Coatings, hot-dip, structure, 229 ; on steel, improving adhesion, use of organic coatings, 329 ; on wire, tests, 328
Zinc Plating, effect on springs, 229
Zinc Surfaces, application and behaviour of phosphate coatings, 229
